

Building on Datasym's reputation for exceptional Hardware/Software, comes our latest and most innovative terminal.....

The Evolution of Datasym continues with the release of our Next Generation POS terminal, the XR650, into the marketplace!

The XR650 is equipped with ethernet communication providing customers with the ability to send & receive data quickly and securely through local area networks or via the internet. Integrated high speed credit/debit reduces transaction times to seconds eliminating long line ups! The adjustable 5.7" color LCD operator display makes transaction viewing and monitoring a breeze. Buffered print furnishes a "clean receipt" through the terminal's thermal printer.

All Datasym POS terminals are Flash ROM based and the XR650 is no exception which makes upgrading simple with no expensive hardware costs. The terminal also comes with 4 megabytes of memory allowing up to a 65,000 item file without adding any memory.

The Datasym XR650, affordably priced with maximum functionality!

SOME OF THE FEATURES AND BENEFITS DESIGNED FOR YOUR NEEDS

FEATURE	FUNCTION	BENEFIT
Major Features		
TCP/IP Communications (Standard)	To communicate to other terminals or PC.	Industry Standard Communications.
5.7" Color LCD Display	Items are easily visible and allows for scrolling forward or backward throughout a transaction.	View and Monitor transactions.
4 Megabytes of Memory (up to 65,000 items)	Identifies and tracks information on each individual item in your store.	Allows you to have up to 65,000 items saved on your system and still have memory available for other optional features.
Single Station Thermal Printer	Quiet, faster and less maintenance.	Larger printed receipt and allows for faster transaction time.
Buffered Print with Clean Receipt	Receipt printed after transaction and items voided in transaction not shown.	Receipt prints fast and does not have unnecessary lines.
2 RS 232 Peripheral Ports	To allow for connection and interface with Scanners, Scales, Datatran, PinPads, Slip Printers, Barcode Blaster, Check Readers, etc.	Industry Standard Peripheral Connections.
2 USB Ports	To allow for connection and interface to Scanners and USB to Serial Converters.	New Industry Standard Communications and Peripheral connections.
Integrated High Speed Debit/Credit/ Gift Cards (Symfinite Module needed)	Expands payment options and offers customers an opportunity to run promotional programs.	Enhances customer service through multiple payment options and transaction in seconds.
Flash ROM Technology	Allows new features to be added without on-site service or need for hardware upgrade.	Saves time and money as it allows the system to be easily updated when software upgrades become available.
Soft Keyboard Layout	Fully customized keyboard layout.	Increased throughput at the checkout, added flexibility, and ease of operation.
Multiple Macros	A function that links keystrokes together and then automates those keystrokes.	Improved transaction and reporting efficiency by grouping together commonly used keystrokes.
10 Shift Levels	Enables the selling of same item in different unit sizes by adding a unique digit to the end of the PLU (i.e., single, six pack, case).	Improves Item control by tracking packaging types.
Management Functions	Custom prompts that are user definable, set-up for admin entries. System collects user defined information for Head Office (i.e., store transfers, bank deposits).	Improves ability to track different packages of same item and allows flexibility to gather information required for software on the backroom or head office computer.
Uninterrupted Polling	Initiated at the terminal, by backroom PC, or remotely by Head Office PC, to gather required information at any time (i.e., end of shift, day, week, etc.).	Improves overall efficiency as terminals can be polled "anytime", without shutting down the terminal.
Global Discounts	Items flagged for specific promotional discounts and applies to only those items (i.e., Senior Citizen discount days).	Provides added control, security, and promotional flexibility.
Item Age Verification	Verifies that the customer legally qualifies to purchase specific items (cigarettes, liquor), by linking to mandatory birth date prompt.	Offers added protection by automatically adhering to Age Verification requirements.
Epson "Quick Release" Printer	Quickly & easily replace printer.	Minimizes downtime for servicing & maximizes productivity.
Up to 150 Departments and 999 Sub-departments	Categorize items in three levels (Items can be in subgroup of group).	Preserves the detail of inventory you are tracking.
Up to 20 Character Item Descriptions	Larger product description enables customer to more easily understand receipt.	Improve customer shopping experience (i.e., increase customer service).
Electronic Journal	Allows you to view daily journals electronically.	This saves paper and gives you the ability to save your journal files electronically.
